## FRONT END DEVELOPER

### WORK EXPERIENCE

#### FRONT END DEVELOPER

ZipRecruiter | 2018 - 2020

- Built Enterprise dashboards displaying campaign and job performance using React
- Created custom line and bar charts with Chart.js ,to visually display key performance indicators
- Refactored our applicant tracking system by removing class based components, and utilizing React Hooks
- Engineered the employer dashboard 2.0, using Redux to manage each component's state, integrating React Pose (now Framer Motion) for complex animations
- Architected insights pages, consisting of charts, maps, and table React components to show high level account information
- Produced single page applications using Lodash, such as our search quality portal, allowing admins to rate jobs to later compare to our AI
- Designed an in-house date picker component to be used for all marketplace reports
- Helped ESM's by building a data visualization tool to search for job data by location
- Developed a SPA signup flow allowing users to setup an account without an admin
- Using Lodash, built a fully filterable search for admins that queries the entire site
- Updated notes, giving users the ability to filter and view all of a campaign's history
- With React, built a reusable component to bulk edit and review/update campaigns

#### JR. FRONT END DEVELOPER

ZipRecruiter | 2016 - 2018

- Designed and re-skinned 6 pages for admin's to view essential data more quickly
- Created in-house reusable custom data tables by constructing algorithm's to handle, update, and export a user's data
- Updated and created new external publisher widgets
- Developed a WYSIWYG, a tool that would show a user's changes to a widget and then spit out the CSS and api request required to retrieve it

#### HACKER IN RESIDENCE

HackReactor | 2015 - 2016 (3 month contract post education)

- Conducted technical interviews and pre-course check-in's to gauge applicants
- Helped students debug errors in their code and provided technical mentoring
