Template Toolkit
Responsive Design

PERSONAL SKILLS

Reliable and professional
Appetite for learning
Self starter
Motivated
Organized
Creative
Team player

EDUCATION

HackReactor | 2015
Software engineering program

Cal Poly SLO | 2014
BS Graphic Communications
   Web & Digital Media

WORK EXPERIENCE

FRONT END DEVELOPER
ZipRecruiter | 2018 - 2020

- Built Enterprise dashboards displaying campaign and job performance using React
- Created custom line and bar charts with Chart.js, to visually display key performance indicators, for use on admin, employer, and enterprise pages
- Refactored our applicant tracking system by removing class based components, utilizing React Hooks, increasing page load speed and code readability for debugging
- Engineered the employer dashboard 2.0, using Redux and React Pose (now Framer Motion) for complex animations, increasing engagement and used by all new organizations
- Architected insights pages, consisting of charts, maps, and table React components to show high level account information to all admin users and all employers
- Produced single page applications using Lodash, such as our search quality portal, allowing admins to rate jobs to later compare to our AI
- Designed an in-house date picker component to be integrated with all admin reports
- Helped the sales team by building a data visualization tool to search for job data by location, removing 4 separate work flows and increasing productivity by 300%
- Developed a single page application signup flow, allowing users to setup an account without an admin, automating a big process allowing sales to focus in other areas
- Using Lodash, built a fully filterable search for admins that queries the entire site, increasing productivity by removing multiple clicks to view a desired page
- Updated notes, giving users the ability to filter and view all of a campaign's history
- With React, built a reusable component to bulk edit and review/update campaigns, removing the need to update one at a time saving admins a lot of time

JR. FRONT END DEVELOPER
ZipRecruiter | 2016 - 2018

- Designed and re-architected 6 pages for admin's to view essential data more quickly
- Created in-house reusable custom data tables by constructing algorithm's to handle, update, and export a user's data
- Updated and created new external publisher widgets, used by ten's of thousands of clients
- Developed a WYSIWYG, a tool that would show a user's changes to an external widget and spit out the CSS and api request required to retrieve it

HACKER IN RESIDENCE
HackReactor | 2015 - 2016 (3 month contract post education)

- Conducted technical interviews and pre-course check-in's to gauge applicants and accepted or rejected them into the program
- Helped students debug errors in their code and provided technical mentoring, giving students that required extra help the support needed
